MAMBA - COMPACT MULTI LOADER

The Mamba is a slender-bodied collection truck that can be loaded from both sides and is able to transfer its load to a bigger rear-loader.

The Mamba's small footprint makes it ideal for narrow streets, hilly suburbs, university campuses, shopping malls and back alleys, where access is tight and turning room is non-existent. The Mamba system is fully customizable and can be fitted to almost any chassis type available in Australia meaning that whatever your preference of truck body, a Mamba module can be fitted to it.

HEALTH AND SAFETY FEATURES

- Fire extinguishers
- 3rd party camera systems and DVR recording
- Custom engineered solutions
- Lighting (work lights, revolving beacons)
- Optional lift-zone monitoring
- Optional reverse monitoring
- Optional cyclist monitoring

QUALITY SERVICE AND TRAINING

We're known for fast, quality service and have the infrastructure to place our team and vehicles where they're needed. We provide the best after-sales support within the industry, and our nationwide network provides global expertise on a local scale. Our units are also tracked by GPS, which allows us to anticipate servicing needs in real-time.

We carry a full range of spare parts and offer repair and maintenance packages at competitive rates. With dedicated service centres and STG partners available to service you Australia-wide.

We provide comprehensive training to help you operate and maintain your truck correctly and get the most out of our state-of-the-art technology. We also offer on-demand refresher training programs.

DIAMONDBACK - REAR LOADER

This modular machine is a big, tough, rear-load garbage collection system that is designed to maximise safety, load capacity and efficiency.

The Diamondback rear loader features a capacious hopper and rapid cycle time to maximise load rate and keep the machines moving fast along city streets where garbage bags or bins are still in use. The Diamondback also features a bin tipper suitable for all domestic wheelie bin sizes.

The large-capacity compaction chambers has high-speed rams capable of exerting nearly 600 kg/m³ of pressure, enough to squash the hardest or bulkiest waste into submission.

HEALTH AND SAFETY FEATURES

- Fire extinguishers
- 3rd party camera systems and DVR recording
- Custom engineered solutions
- Lighting (work lights, revolving beacons)

ROTO PAC® - SIDE LOADER

The next step in waste collection comes in the form of the revolutionary ROTO PAC® system. Based around an auger that pushes waste from the collection hopper into the compaction chamber, the ROTO PAC® makes it easy to change from standard waste to FOGO waste, thus eliminating the need for separate vehicles.

The auger configuration at the heart of the ROTO PAC® system is able to move waste into the compaction chamber three times faster than the conventional “pack panel” design. This is a far more efficient way in which to compact the waste and it allows for more time on the collection routes and less time travelling to and from the refuse tipping facility.

HEALTH AND SAFETY FEATURES

STG GLOBAL

THE TUSK - FRONT LOADER

When you've got a lot of waste to collect, the Tusk Front-loader is the beast to have. The Tusk is built for the big jobs and the heavy, industrial collection routes. With an impressive 2'500 KG lift capability.

With a body capable of holding between 28m³ and 33.5m³, the Tusk is built to take big loads and minimise the number of times your drivers need to empty. This impressive capacity means that less fuel is expended in driving back to the disposal facility and the machine can stay on the job for longer.

Add to that the 6x4 or 8x4 wheel configurations and you can use the Tusk in almost any location and on any kind of terrain: an important consideration given Australia's often rough and isolated roads and long distances.

HEALTH AND SAFETY FEATURES

- Fire extinguishers
- 3rd party camera systems and DVR recording
- Custom engineered solutions
- Lighting (work lights, revolving beacons) integrated
- Storage toolboxes
- In cab and body E-stops
- Animated turn signals
- Hydraulic safety burst valves
- Safety interlock
- Optional lift-zone monitoring
- Optional reverse monitoring
- Optional cyclist monitoring

STG GLOBAL

THE BANDIT - SIDE LOADER

When it came to designing an optimum machine for collecting domestic waste from town and city streets, the crew at STG Global had a simple brief: make it efficient and make it safe. The resulting garbage truck is the famous Bandit.

Efficiency is of paramount importance in domestic waste collection. The Bandit's fast compaction rate and long reach means that each pickup is completed rapidly and the bin returned safely to the kerb in the minimum time. The shorter wheelbase and low centre of gravity means that tight turns on narrow cul-de-sacs are easy in the Bandit and the 12m³ - 24m³ capacity Saab Hardox 450 HiAce 450 steel body requires fewer return trips to the dumping facility.

The nifty modular design makes it easy for separate parts of the Bandit to be removed for servicing or repairs. Add to that an ergonomic joystick and iPad-based control interface, and you have a machine that is pleasant for the operator to use and thus less stressful and tiring.

HL22 HOOKLIFT

Hooklift trucks are versatile additions to any fleet. Whether you are in the mining, infrastructure or waste management industries, being able to rapidly, safely and efficiently pick up bins or change body configurations is a handy option. Hooklift trucks are especially useful to waste management companies as they make collecting large bins extremely easy: no more messing about with chains and swing arms.

Fitted to a rugged truck chassis (your choice, of course), the HL22 system will revolutionise your waste collection regime. As an addition to your waste collection fleet, the HL22 will add another level of sustainability, efficiency and adaptability to your business. As always, the crew at STG Global have gone all out to design and build a machine that is tough, reliable and simple to use.

HEALTH AND SAFETY FEATURES

- Fire extinguishers
- 3rd party camera systems and DVR recording
- Lighting (work lights, revolving beacons)
- Soft unloading at end stroke for safe operation and increase longevity of product
- Fast tipping/Unloading with regenerative fast speed (22 seconds vs 65 seconds on a conventional hook lift)
- Rear roller – safely load containers in narrow conditions
