DIAMONDBACK - REAR LOADER

This modular machine is a big, tough, rear-load garbage collection system that is designed to maximise safety, load capacity and efficiency.

The Diamondback rear loader features a capacious hopper and rapid cycle time to maximise load rate and keep the machines moving fast along city streets where garbage bags or bins are still in use. The Diamondback also features a bin tipper suitable for all domestic wheelie bin sizes.

The large-capacity compaction chambers has high-speed rams capable of exerting nearly 600 kg/m³ of pressure, enough to squash the hardest or bulkiest waste into submission.

HEALTH AND SAFETY FEATURES

- Fire extinguishers
- 3rd party camera systems and DVR recording
- Custom engineered solutions
- Lighting (work lights, revolving beacons)
- Optional lift-zone monitoring
- Optional reverse monitoring
- Optional cyclist monitoring

QUALITY SERVICE AND TRAINING

We're known for fast, quality service and have the infrastructure to place our team and vehicles where they're needed. We provide the best after-sales support within the industry, and our nationwide network provides global expertise on a local scale. Our units are also tracked by GPS, which allows us to anticipate servicing needs in real-time.

We carry a full range of spare parts and offer repair and maintenance packages at competitive rates. With dedicated service centres and STG partners available to service you Australia-wide.

We provide comprehensive training to help you operate and maintain your truck correctly and get the most out of our state-of-the-art technology. We also offer on-demand refresher training programs.
